

L'Optimist

Operational Efficiency Through Smarter Workflows

After years as a Data Scientist and Product Manager, I noticed teams weren't struggling because they lacked talent: they were struggling because of inefficient workflows. Too many systems that don't talk to each other. Too many misaligned priorities between teams. Too much time managing processes instead of driving outcomes. Now I help businesses streamline operations and find clarity and flow in how they operate.

| What I Do

With 10+ years as a Product Manager and Data Scientist consulting for for-profit and non-profit clients, now I help companies find clarity in how they operate. From automating reporting to strengthening client engagement to improving cross-team communication: AI-powered when it makes sense, human-centered always. Whether you're drowning in tools or losing time to handoffs, small tweaks can save hours every week.

EDUCATION

MS in Applied Mathematics (Machine Learning & Computer Vision)

BA in International Studies, University of Chicago

If your team's processes feel heavier than they should, let's talk.
